

SUNDHAR AJMERA

DevOps Engineer | Cloud Infrastructure | Automation | CI/CD

+84 826 084 299 | aitechwithsundhar@gmail.com | Vung Tau, Vietnam
linkedin.com/in/sundhar-ajmera-921687389 | github.com/aitechwithsundhar-cmd

PROFESSIONAL SUMMARY

DevOps Engineer with hands-on experience in infrastructure automation, CI/CD pipelines, and cloud technologies. Proficient in Ansible, Terraform, Docker, Kubernetes, AWS, and Azure. Experienced in Shell scripting, Python, Jenkins, and GitHub Actions for automated deployments. Skilled in managing databases including MySQL, MongoDB, and Redis, and configuring Nginx, RabbitMQ, and Packer. Unique combination of DevOps engineering and 2+ years of AI and Robotics education experience. Passionate about building scalable, reliable, and automated infrastructure solutions. Actively seeking DevOps Engineer roles worldwide.

WORK EXPERIENCE

Software Engineer — DevOps

Ket noi TM DV & DL Link | Vung Tau, Vietnam | Hybrid

April 2025 – Present

- Automate infrastructure provisioning using Ansible playbooks, roles, and Terraform IaC on AWS
- Write and maintain Shell scripts (Bash) for Linux server administration and task automation
- Build and manage CI/CD pipelines using Jenkins and GitHub Actions for automated deployments
- Containerize applications using Docker and orchestrate workloads with Kubernetes
- Provision and manage cloud infrastructure on AWS using Terraform and Packer for AMI creation
- Administer databases including MySQL, MongoDB, and Redis in production Linux environments
- Configure and maintain Nginx reverse proxy, load balancer, and RabbitMQ message broker
- Implement version control workflows using Git and GitHub for infrastructure as code

STEM and AI Robotics Instructor

STEM.AI Center | Vung Tau, Vietnam

2022 – 2024

- Delivered hands-on AI and Robotics curriculum to 50+ children aged 6-14 using UBTech platform
- Taught 6 complete AI courses covering robotics design, engineering, automation, and smart systems
- Guided students to build and program autonomous AI robots, wind turbines, and sensor-based models
- Developed project-based lesson plans making complex AI and programming concepts accessible
- Maintained strong student outcomes across 2+ years of consistent teaching and curriculum delivery

TECHNICAL SKILLS

Cloud Platforms: AWS (EC2, S3, VPC, IAM, Route53), Microsoft Azure

Infrastructure as Code: Terraform, Ansible, Ansible Roles, Packer

CI/CD & Automation: Jenkins, GitHub Actions, Shell Scripting (Bash), Python

Containers & Orchestration: Docker, Kubernetes

Databases: MySQL, MongoDB, Redis

Messaging & Web: RabbitMQ, Nginx

Version Control: Git, GitHub

Operating Systems: Linux (Ubuntu, CentOS), Windows

KEY PROJECTS

■ Roboshop E-Commerce — Phase 1: Manual Shell Scripting Deployment

Tech Stack: AWS, Linux, Shell (Bash), Nginx, MySQL, MongoDB, Redis, RabbitMQ, Node.js

- Manually deployed a full-stack e-commerce microservices application (Roboshop) on AWS Linux servers
- Wrote Shell scripts to install, configure, and start each service including MongoDB, Redis, MySQL, RabbitMQ, Node.js, and Nginx
- Configured system services with systemd, managed firewall rules, and set up reverse proxy with Nginx
- Gained deep understanding of each application layer by manually deploying and troubleshooting every component

■ Roboshop E-Commerce — Phase 2: Ansible Playbook Automation

Tech Stack: Ansible, AWS, Linux, Nginx, MySQL, MongoDB, Redis, RabbitMQ

- Re-implemented entire Roboshop deployment using Ansible playbooks to eliminate manual steps
- Automated configuration of all 8+ microservices with idempotent, repeatable playbooks
- Reduced deployment time by 80% compared to manual Shell script approach
- Implemented inventory management and variable handling for multi-environment deployments

■ Roboshop E-Commerce — Phase 3: Ansible Roles Refactoring

Tech Stack: Ansible Roles, Jinja2 Templates, AWS, Linux

- Refactored monolithic Ansible playbooks into modular, reusable roles for each microservice
- Implemented Jinja2 templating for dynamic configuration file generation across environments
- Improved code maintainability, reusability, and team collaboration using role-based structure
- Applied Ansible best practices including handlers, defaults, vars, and meta configurations

■ Roboshop E-Commerce — Phase 4: Terraform Infrastructure Provisioning

Tech Stack: Terraform, AWS (EC2, VPC, Security Groups, Route53), Packer

- Provisioned complete AWS cloud infrastructure for Roboshop using Terraform IaC
- Automated creation of EC2 instances, VPC, subnets, security groups, and Route53 DNS records
- Used Packer to create custom AMIs with pre-installed dependencies to speed up deployments
- Managed Terraform state files and implemented modular Terraform code for reusability

■ Roboshop E-Commerce — Phase 5: Docker & Kubernetes Containerization

Tech Stack: Docker, Kubernetes, AWS, Nginx, MySQL, MongoDB, Redis, RabbitMQ, Python

- Containerized all Roboshop microservices using Docker with optimized multi-stage Dockerfiles
- Orchestrated full application deployment on Kubernetes with Deployments, Services, and ConfigMaps
- Implemented Kubernetes auto-scaling, health checks, and rolling updates for zero-downtime deployments
- Configured Kubernetes ingress with Nginx controller for traffic routing across microservices
- Achieved high availability and fault tolerance with Kubernetes self-healing capabilities

EDUCATION

Bachelor of Technology — Information Technology

Rajeev Gandhi Institute of Technology & Management | India

March 2014 – May 2018

Open to DevOps Engineer | Cloud Engineer | Site Reliability Engineer | Infrastructure Engineer roles worldwide
