PROFESSIONAL SUMMARY

Results-driven DevOps Engineer with hands-on experience in infrastructure automation, CI/CD pipelines, and cloud technologies. Skilled in Ansible, Terraform, Docker, Kubernetes, AWS, and Azure. Unique background combining 2+ years of AI and Robotics education at STEM.AI center with practical software engineering experience. Actively seeking DevOps Engineer roles to deliver scalable, automated infrastructure solutions.

PROFESSIONAL EXPERIENCE

Software Engineer — DevOps

Ket noi TM DV & DL Link | Vung Tau, Vietnam | Hybrid

April 2025 – Present

- Automate infrastructure deployment using Ansible playbooks and Terraform IaC
- Manage Linux servers and perform Shell scripting for system administration tasks
- Implement Roboshop project automation using Ansible roles and modules
- Work with Docker containers and Kubernetes orchestration for application deployment
- Manage databases including MySQL, MongoDB, and Redis in production environments
- Configure Nginx web server and RabbitMQ message broker for application stack

STEM & AI Robotics Instructor

STEM.AI Center | Vung Tau, Vietnam

2022 – 2024

- Delivered hands-on AI and Robotics curriculum to children aged 6-14 using UBTech platform
- Taught 6 complete AI courses: AI Super Designer, AI Super Engineer, AI Super Assistant, AI Magic World, AI Smart Life, AI Transformer Workshop
- Guided students to build and program autonomous AI robots, wind turbines, and sensor-based robots
- Developed engaging project-based lesson plans adapting complex AI concepts for young learners
- Maintained 2+ years of consistent teaching with strong student engagement and outcomes

TECHNICAL SKILLS

Cloud Platforms	AWS, Microsoft Azure
DevOps & Automation	Ansible, Terraform, Packer, Jenkins, GitHub Actions
Containers	Docker, Kubernetes
Scripting & Programming	Shell Scripting (Bash), Python
Databases & Messaging	MySQL, MongoDB, Redis, RabbitMQ
Web & Networking	Nginx, Linux System Administration

Version Control	Git, GitHub
AI & Education	UBTech Robotics, STEM Curriculum, AI Fundamentals

EDUCATION

Bachelor of Technology — Information Technology

Rajeev Gandhi Institute of Technology & Management

March 2014 – May 2018

KEY PROJECTS — ROBOSHOP EVOLUTION

■ Phase 1 — Roboshop Manual Deployment (Shell Scripting)

Manually deployed full Roboshop e-commerce application using Shell scripting. Set up and configured all services including MongoDB, Redis, MySQL, RabbitMQ, Nginx, and Node.js from scratch.

■ Phase 2 — Roboshop with Ansible

Re-implemented Roboshop deployment using Ansible playbooks to automate all manual steps. Eliminated human errors and reduced deployment time significantly.

■ Phase 3 — Roboshop with Ansible Roles

Refactored Ansible playbooks into reusable, modular roles for each service. Improved maintainability, reusability, and scalability of the infrastructure code.

■ Phase 4 — Roboshop with Terraform

Provisioned cloud infrastructure for Roboshop using Terraform IaC. Automated creation of servers, networking, and security groups on AWS.

■ Phase 5 — Roboshop with Docker & Kubernetes

Containerized all Roboshop microservices using Docker and orchestrated deployment with Kubernetes. Achieved high availability, auto-scaling, and zero-downtime deployments.
